

CBD ISOLATE

Profile: +/- 99% CBD

About The Product: CBD Isolate is a pure, crystalline, flavorless pharmaceutical grade powder that is 99+% pure CBD. All of the hemp plant matter is removed from the isolate, including oils, waxes, chlorophyll, and more, resulting in CBD powder that is nearly chemically pure. That degree of purity makes it extremely easy to dose accurately. Since it is flavorless, it can be easily introduced into products without altering the flavor profile.

CBD Isolate is one of the most cost-effective raw materials available, and is suitable for use in nearly all CBD consumer products. It does not contain any minor cannabinoids in its profile, making it suitable for applications where CBD content and ease of dosing is paramount and minor cannabinoid profile is less crucial.
